

IN THE CLAIMS:

Please amend claim 1 to read as follows:

B<sup>1</sup>

1            1. (amended) A printed circuit board holding structure for attaching a printed  
2 circuit board on an attachment object member, the printed circuit board defining a  
3 longitudinal direction, the holding structure comprising:  
4            a chassis;  
5            a first guide member connected to the chassis and having a taper face for guiding  
6 the printed circuit board in the transverse direction transverse to the longitudinal direction  
7 in response to fixedly putting the printed circuit toward the chassis on the attachment  
8 object member; and  
9            a second guide member having a taper face for guiding the printed circuit board  
10 toward the chassis in response to sliding the printed circuit board in the longitudinal  
11 direction.

Please add a new claim 6 as follows:

B<sup>2</sup>

1            6. (new) A printed circuit board holding structure for attaching a printed circuit  
2 board on an attachment object member, comprising:  
3            a first guide member having a vertical guide face and a first taper face; and  
4            a second guide member having a horizontal guide face and a second taper face;  
5            wherein the first taper face is inclined at a first angle from the vertical guide face  
6 and an axis of the first angle is parallel to the horizontal guide face; and  
7            wherein the second taper face is inclined at a second angle from the horizontal  
8 guide face and an axis of the second angle is perpendicular to the vertical guide face.
